LIBON
MEADOW FESCUE

THE JUDICIOUS CHOICE!

LIBON

Features:

- Meadow fescue

Heading date:

- 10/05

Heading date observed in trials performed in West Central France

Profile:

- Long term

Persistency:

- 4 years and more

Soil types:

- Healthy and deep

Sowing rate:

25-30 kg/ha (10-12 kg/ac) as pure

ITS ADVANTAGES

LIBON is a meadow fescue adapted to oceanic climate.

• A well-distributed production:

- LIBON is very productive and its production is well distributed between the spring and the summer.

• A well-consumed fodder:

- LIBON is a rustic variety resisting well to diseases, in particular the blights and helminthosporium.
- The forage produced remains palatable for animals and very well consumed.

• A variety adapted to mix:

- LIBON combines well with other grasses such as the perennial ryegrass.
- LIBON brings a food value and some palatability to the mix.

FOR WHAT USE ?

Grazing	Mowing
	

Seeding (August-September or March-April):

- Prepare a thin surface soil;
- Seed at a depth of 1 up to 2 cm;
- Roll right after seeding.

Protection:

- Monitor slugs during the implantation and take action if needed;
- Remove the weeds during the establishment as early as 3-4 leaves stage if needed (seek advice from your technician).

Packaging:
Bag of 10 kg

Scores refer to registration trials performed in France. They range from 1 (very low) to 9 (very good). 2021-Non-contractual document. This document is provided for information purposes only. Recommendations may vary according to local soil and climate conditions and local agricultural practices.
