SUCRAL

PERENNIAL RYEGRASS

YOUR MEADOWS' SWEETNESS!

SUCRAL

Features:

- Perennial ryegrass
- Tetraploid

Heading date:

- 22/05

Heading date observed in trials performed in West Central France

Profile:

- Long term

Persistency:

- 4 years and more

Soil types:

- Healthy and deep

Sowing rate:

- 25 to 30 kg/ha (10 to 12 kg/ac) as pure
- or in combination with 2 to 3 kg/ha (0.8 to 1.2 kg/ac) white clover

ITS ADVANTAGES

Improved animal performances:

- SUCRAL as been selected to produce a forage very rich in sugars and highly digestible.
- The high sugar content of SUCRAL enhances its palatability and its ingestion and also allows a better efficiency of the consumed nitrogen and therefore an increased production of milk and meat.

A rustic and productive variety:

- SUCRAL is a productive variety that distinguishes itself by its ability to produce a forage in summer/fall unlike other varieties that deplete after a high growth during the spring.
- SUCRAL also has a very good health status (resistant to diseases) ensuring the production of healthy leaves in any situations.

FOR WHAT USE ?

Grazing	Mowing
	

Seeding (August-September or March-April):

- Prepare a thin surface soil;
- Seed at a depth of 1 up to 2 cm;
- Roll right after seeding.

Protection:

- Monitor slugs during the implantation and take action if needed;
- Remove the weeds (as early as 3-4 leaves stage) if needed (seek advice from your technician).

Packaging:
Bag of 15 kg

Scores refer to registration trials performed in France. They range from 1 (very low) to 9 (very good). 2021-Non-contractual document.
